Advanced Word | Operations Portfolio

EVIDENCE EDITION • 5 simulated workplace case studies • prepared 27 Oct 2026

Prepared for: Jamie Christian II | Version 2.0 | Document status: Independent training / portfolio demonstration

This package includes full Word deliverables, fictional source files, completed work outputs, repeatable control checks, mail-merge fields, a protected demonstration copy, and a simulated audio exercise. It does not claim real employment, independent human typing scores, or professional certification.

Portfolio contents (auto-updating Word field)

Right-click > Update Field to build the table of contents in desktop Microsoft Word.

Job-role coverage and recommended case studies

Target role family	Best portfolio evidence
Data Entry / Data Verification / Data Processor	Project 01 clean master, 12 raw source rows, 3 exceptions, nine-letter mail merge
Typist / Transcriptionist / Word Processing	Project 02 playable synthetic audio, 19-turn transcript, minutes; Word templates
Billing / Payroll Clerk	Project 03 8 service lines, 4 posted transactions, 5 approved timecards
Health Information / Medical Coder	Project 04 6 synthetic encounters; supported codes vs explicit holds
Data Steward / Governance	Project 05 480-row input, 462-row golden master, 27 pair decisions

Word skills demonstrated

- Styles and hierarchy: multilevel headings and consistently styled tables; repeating header rows and page numbering.
- Advanced fields: true MERGEFIELD recipient data in the mail-merge master and a TOC field in this guide.
- Change control: source versus target records, exception disposition, handoff and approval evidence.
- Reusable forms: editable change-request template plus a passwordless, read-only Word restriction demonstration.
- Document production: separate raw transcription, clean transcript, meeting minutes, correspondence and audit documents.

Objective test rubric

Test	Passing threshold	Evidence
Data validation	12/12 classified; 9/9 final emails unique	Project 01 input and output CSV
Transcription reproduction	19/19 speaker turns and 4/4 action owners	Project 02 audio + reference + blank doc
Finance arithmetic	Zero-cent A/R difference; all 5 gross pays agree	Project 03 raw ledger and corrected register
Health coding judgment	Never treat tentative outpatient dx as established	Project 04 holds and provider query

Test	Passing threshold	Evidence
Stewardship repeatability	480 = 462 + 18; 27 candidate decisions logged	Project 05 data CSVs and decision ledger

How to present this work in interviews

- Introduce it explicitly as an independent simulated operations project—not employment or client experience.
- Show one raw source and the corresponding final document, then explain an exception that you refused to silently correct.
- For a Word-heavy role, use the mail-merge master and generate a new batch live from the supplied CSV.
- For transcription, use the WAV for a real practice test and report ONLY your own independently measured results.
- For finance, articulate authorization boundaries: gross-only pay and no simulated payment release.
- For medical coding, identify your credential/training honestly and explain why unsigned or tentative diagnoses are held.
- For stewardship, recalculate completeness from the 462-row master and discuss failing control thresholds.

Limitations and evidence integrity

All names, businesses, medical encounters and financial items are invented. TTS audio is a generated training exercise and does not authenticate human performance. The medical coding examples are limited in scope, require qualified independent review before production, and do not imply certification. Payroll calculations use an intentionally simplified federal baseline and do not authorize payments. A simulated work product cannot guarantee employment or competence in a regulated field.
