CASE STUDY 02 / 05

Executive Transcription & Minutes

Editorially controlled transcript • meeting minutes • production-quality Word layout

BUSINESS SCENARIO

A vendor-onboarding team needs a rough simulated meeting record converted into a clean transcript, consistent minutes, decisions, action assignments, and an editorial QA log suitable for internal circulation.

COMPLETED DELIVERABLE Speaker-attributed source transcript, clean-read transcript, board-style minutes, action register, edit policy, and final proofreading signoff.

ROLE COVERAGE

Typist • Transcriptionist • Word Processing Specialist

EVIDENCE AT A GLANCE

4	4	2
MEETING PARTICIPANTS	TRACKED ACTIONS	DOCUMENT FORMATS

PREPARED BY **Jamie Christian II**

Document status: Completed sample | Version: 2.0 · Evidence Edition | 27 Oct 2026

Portfolio disclosure: All organizations, records, people, and transactions are fictional. This is a simulated work product, not a claim of past paid employment or client work.

01 / ASSIGNMENT & TRANSCRIPTION STANDARD

Meeting control sheet

Attribute	Value
Meeting	Q4 Vendor Onboarding Readiness Review
Date / time	2026-10-21 / 09:30–09:42 ET (simulated)
Participants	Aisha Bennett (Program Lead); Morgan Hale (Operations); Rowan Gray (Finance); Casey Liu (Support)
Purpose	Confirm supplier readiness, resolve documentation gaps, and release the October intake batch
Production mode	Clean-read, not verbatim; preserve substance and action ownership
Source type	Fictional scripted dialogue; synthetic TTS audio companion available; not recorded real speech.

Editorial standards used

- Preserve numbers, dates, names, decisions, commitments, and speaker attributions.
- Remove only non-substantive fillers and repeated starts; do not repair uncertainty by guessing.
- Use [inaudible] only for genuinely unclear audio; not used because this sample has written source text.
- Tag ambiguous statements for confirmation before turning them into an action or official decision.

COMPLIANCE DISTINCTION

This is a word-processing and transcription-formatting demonstration based on a scripted source. It does not prove audio listening accuracy, words-per-minute speed, or certification.

02 / SOURCE DIALOGUE — FIRST HALF

Fictional rough meeting record (source text)

09:30:02 | AISHA Okay, good morning. We need to, um, get through the vendor list before the Thursday handoff. Morgan, where are we at?

09:30:39 | MORGAN Yeah, so I counted eighteen. Fourteen, 14, are ready in the portal. There are three with insurance certificates missing, and one, one supplier, still owes the W-9.

09:31:23 | ROWAN For the finance side the W-9 is blocking payment setup. I can send another request today, but I need the supplier contact to verify the legal name.

09:32:03 | AISHA So let's not mark anyone ready without the required docs. I want a single owner on every item.

09:32:41 | CASEY The dashboard is still showing fifteen ready, actually. That looks like a stale sync, so I'll refresh the cache and compare with the intake log.

09:33:22 | MORGAN Please keep the number at fourteen for the official count until that check is finished. We shouldn't use the dashboard number in the status email.

09:34:09 | ROWAN I can close the tax form if it arrives by tomorrow, October twenty-second, and the name matches the registration. Otherwise it stays pending.

09:34:51 | AISHA Agreed. Morgan, can you contact those three suppliers for certificates by Friday the twenty-third?

09:35:19 | MORGAN Yes. I'll email all three today and follow up by Friday. I'll attach the evidence to the exceptions log.

03 / SOURCE DIALOGUE — SECOND HALF

Fictional rough meeting record (continued)

09:36:04 | CASEY I can do a cache refresh by the twenty-sixth, and I will add a note on the difference between the portal count and the dashboard count.

09:36:47 | AISHA Fine. The signoff will be on the twenty-eighth, assuming we have all the documents and the dashboard ties out.

09:37:29 | ROWAN Wait, to clarify, the signoff doesn't itself authorize payment setup if the W-9 is still missing, right?

09:38:04 | AISHA Correct. If the W-9 is missing, that supplier remains blocked. We can approve the other eligible ones individually.

09:38:39 | MORGAN Can we also add a simple weekly status line with received, verified, outstanding and escalated?

09:39:21 | CASEY Yes, I'll revise the tracker labels so that verified means documentation complete, not merely submitted.

09:40:02 | AISHA Good. Let's send the update only after the operations count is reconciled. Any other blockers?

09:40:34 | ROWAN Nothing else from finance. I will note if the name on the W-9 differs from the supplier record.

09:41:13 | MORGAN No more on operations. I'll keep the three insurance items separate so there is no confusion.

09:41:51 | AISHA Thanks. Morgan owns the certificates, Rowan owns the W-9, Casey owns the refresh, and I own the readiness signoff. Meeting closed.

04 / CLEAN-READ TRANSCRIPT

Edited transcript — circulation copy

[09:30] Aisha Bennett: We need to complete the vendor readiness review before Thursday's handoff. Morgan, please provide the current status.

[09:30] Morgan Hale: We have 18 vendors: 14 ready in the portal, three missing insurance certificates, and one missing a W-9.

[09:31] Rowan Gray: The missing W-9 blocks payment setup. I can request it today, but the supplier's legal name must be verified.

[09:32] Aisha Bennett: Do not mark a supplier ready without the required documents. Assign one owner to each exception.

[09:32] Casey Liu: The dashboard shows 15 ready; that appears to be a stale synchronization. I will refresh and reconcile it against the intake log.

[09:33] Morgan Hale: Use 14 as the official ready count until reconciliation is complete. Do not circulate the dashboard figure.

[09:34] Rowan Gray: If the W-9 arrives by October 22 and the legal name matches, I can close the tax-form exception. Otherwise it remains pending.

[09:34] Aisha Bennett: Morgan, contact the three suppliers for insurance certificates by Friday, October 23.

[09:35] Morgan Hale: I will email them today, follow up by October 23, and attach evidence to the exceptions log.

[09:36] Casey Liu: I will refresh the cache by October 26 and document any difference between portal and dashboard counts.

[09:36] Aisha Bennett: Readiness signoff is targeted for October 28, subject to document completion and count reconciliation.

[09:37] Rowan Gray: Does signoff permit payment setup if a W-9 remains missing?

[09:38] Aisha Bennett: No. Any supplier lacking a W-9 remains blocked. Eligible suppliers may be approved individually.

[09:38] Morgan Hale: We should add weekly status counts for received, verified, outstanding, and escalated.

[09:39] Casey Liu: I will revise tracker labels. "Verified" will mean documentation complete, not merely submitted.

[09:40] Aisha Bennett: Issue the status update only after the operations count is reconciled.

[09:40] Rowan Gray: Finance will flag any legal-name mismatch on the W-9.

[09:41] Morgan Hale: The three insurance exceptions will remain separate in the log.

[09:41] Aisha Bennett: Owners: Morgan—certificates; Rowan—W-9; Casey—dashboard refresh; Aisha—signoff. Meeting closed.

05 / EXECUTIVE MINUTES

Meeting minutes — approved working draft

Purpose: Confirm onboarding eligibility and establish a controlled October readiness gate.

Summary of discussion

- The source-of-truth portal shows 14 of 18 vendors ready; the dashboard shows 15, requiring reconciliation.
- Four vendors have outstanding documents: three certificates of insurance and one W-9.
- Payment setup stays blocked when the required W-9 is absent, regardless of readiness signoff.
- The status tracker will distinguish “submitted” from “verified” documentation.

Decisions recorded

ID	Decision	Accountable
D-01	Use 14 ready vendors for official communications pending count reconciliation.	Aisha
D-02	No ready designation without required documentation.	Morgan
D-03	No payment setup for the supplier missing a W-9.	Rowan
D-04	Target readiness signoff October 28 subject to reconciled counts and documents.	Aisha

Action tracker

Action	Deliverable	Owner	Due
A-01	Obtain 3 certificates; log contact evidence	Morgan	Oct 23
A-02	Verify and obtain missing W-9	Rowan	Oct 22
A-03	Reconcile dashboard count / update definitions	Casey	Oct 26
A-04	Complete readiness approval review	Aisha	Oct 28

06 / EDITORIAL QA

Controlled editing and proofreading record

Edit type	Source issue	Final treatment
Disfluencies	“eighteen. Fourteen, 14”	“18 vendors: 14 ready”
Non-substantive filler	“um,” “okay,” “yeah, so”	Removed only where meaning unchanged
Terminology	“insurance certificates”	Retained; no unsupported expansion
Dates	“Friday the twenty-third”	October 23, 2026
Meaning preservation	Signoff versus payment authorization	Explicitly preserved as separate decisions
Unverified count	Dashboard 15 vs. portal 14	Conflict retained and routed for reconciliation

Quality acceptance

PASS 19 edited speaker turns trace to scripted rough-dialogue turns.

PASS All 4 action owners and target dates are reflected in the minutes.

PASS No invented meeting resolution for the dashboard mismatch.

PASS Consistent speaker names, timestamp syntax, document styles, and action IDs.

PASS Source explicitly labeled as written simulation, not audio proof.

CONTROLLED RELEASE

Control	Final result
Document owner	Document Production / Editorial QA
Review state	Approved for training portfolio
Review date	2026-10-27
Data classification	Fictional sample / no real personal, financial, or medical data

07 / SOURCE AUDIO

Audio-supported transcription exercise

NEW: A reproducible WAV file was synthesized from the 19 written rough-dialogue turns and bundled as SOURCE_simulated_meeting_audio.wav. This creates a real listening exercise with a matching answer key. The audio is computer-generated: it is NOT evidence that a human recorded, heard, or transcribed a professional meeting.

Asset	What it tests / proves
Synthetic WAV audio	A playable sound input for practice and assessment
Source speech script answer key	Exact spoken words for checking content
Blank Word practice copy	Independent listening and formatting exercise
Clean-read transcript reference	Completed editorial standard, 19 attributed turns
Minutes and action tracker	Decisions, counts, ownership and deadlines

Objective review criteria

Quality dimension	Acceptance threshold
Turn attribution	19 / 19 speakers correctly attributed
Business-critical facts	All 18/14/3/1/15 counts, dates and blockers preserved
Action transfer	4 / 4 owners and assigned deadlines correctly captured
Meaning integrity	No fabricated resolution of dashboard discrepancy
Style quality	Clean typography, accessible headings, no silent ambiguity

08 / QUALITY SCORECARD

Repeatable transcription skills assessment

Suggested scored test: 100 available points, awarded after a human listens to the synthetic WAV and independently reviews the submitted Word transcript. This workbook provides the scoring framework; it does not claim that the portfolio owner achieved a measured human listening score.

Control	Maximum	Evaluator evidence
Word accuracy / omissions	30	Compare every turn with reference script
Speaker attribution	15	19 named spoken turns reviewed
Dates, numbers, blockers	20	Check 18 / 14 / 15, October deadlines and W-9
Minutes decision fidelity	15	Ensure 4 decisions and 4 action owners supported
Document styling / proofreading	10	Word headings, spacing, consistent usage
Professional QA trail	10	Open uncertainties tagged; final review signed
TOTAL	100	Record independently; do not prefill result

Word production enhancements

- A separate fillable practice layout is provided as an editable .docx, alongside the completed 19-turn reference.
- The transcript and minutes show distinct deliverable types: source preservation, edited circulation copy, decision memo, and action register.
- For an interview, play a short segment and explain why the stale-dashboard count must remain unresolved until verified.

DEEP-DIVE CASE FILE / WORD-01

Editorial method: verbatim, clean-read and minutes

The same synthetic audio supports three distinct deliverables. Strict verbatim preserves repetitions and audible false starts; clean-read maintains meaning while improving readability; meeting minutes summarize decisions and tasks. An editor must never silently turn a tentative statement into an approved decision.

Output	Retain	May simplify	Do not do
Verbatim transcript	All audible words / false starts	Speaker layout only	Invent speech or replace facts
Clean-read transcript	Names, dates, quantities, intent	Filler, punctuation, broken syntax	Alter uncertainty or commitments
Meeting minutes	Decisions, unresolved items, owners	Nonessential dialogue	Present a draft action as settled

19-turn synthetic audio work order

- Input: SOURCE_simulated_meeting_audio.wav (computer-generated, not a human meeting).
- Time stamp speaker turns and preserve speaker labels; compare to 19-turn answer key.
- Tag uncertain words as [unclear] or [inaudible] with timestamps rather than guessing.
- Produce clean-read transcript plus a separate concise decisions-and-actions document.
- Run numeric check against source script: counts, dates, names, owner and deadline references.
- Proof in Word using styles, navigation headings, spell-check and table accessibility.

DEEP-DIVE CASE FILE / WORD-02

Advanced proofreading: 18 reproducible control tests

Test	Problem class	Required handling
01	Speaker attribution	Retain [Speaker unknown] and request clarification
02	Uncertain numeric value	Mark [unclear]; do not guess
03	Homophones	Resolve only with context
04	Date mentioned	Use literal date phrase if meeting date uncertain
05	Meeting decision	Record as proposed until explicitly approved
06	Open issue	Capture status as open
07	Owner missing	Raise minutes query
08	Overlong sentence	Add safe punctuation without changing meaning
09	Confidential item	Flag for approved redaction
10	Filler words	Use defined clean-read policy

Additional controls

Test	Problem class	Required handling
11	Unclear acronym	Retain spoken version and mark review
12	Terminology drift	Apply approved proper-noun glossary
13	File naming	Apply naming convention
14	Version control	Retain version history
15	Unapproved rewording	Revert and document editor decision
16	Action deadline	Preserve given phrasing and flag ambiguity
17	Number in title	Review numeric consistency
18	Final proof	Render and inspect every page

DEEP-DIVE CASE FILE / WORD-03

Deliverable specifications and acceptance scoring

Dimension	Weight	How to score
Faithfulness to audio	35	Count fact preservation and unapproved changes
Speaker attribution	15	19 of 19 turns independently reviewed
Action summary correctness	20	Owners, deadlines and decision status align
Professional Word format	15	Styles, consistent tables, header/footer and page navigation
Accessibility and export QA	15	Readable PDF text, bookmarks where supported, sensible layout

Suggested assessment threshold: 90/100 for a practice pass, zero fabricated actions, and no unresolved high-risk ambiguity in final release. This is an internally defined training rubric. No personal typing speed or transcription accuracy is claimed.

Word processing production workflow

- Create a controlled master template with named styles for Title, Heading 1, Heading 2, Body, and Note.
- Use real table structures for action items; repeat table headers and avoid split rows.
- Use Word navigation pane and heading levels, then export a selectable-text PDF.
- Remove tracked changes or comments when creating an approved external release; retain redlines internally.
- Verify layout after conversion; compare timestamps and page counts with the final Word draft.
- Store clearly distinguished working, reviewed, and approved copies to avoid mistaken distribution.

Honest interview description

“I worked through a simulated 19-speaker-turn transcription exercise using an actual audio file, documented clean-read choices, and created a separate action-tracking record. I also built a reproducible proofreading checklist to detect inaccurate dates, owners, figures and ambiguity.”
